DETAILED ACTION***Allowable Subject Matter***

1. Claims 1 and 3 – 13 are allowed over the prior art of record.
2. The following is an examiner's statement of reasons for allowance:

The prior art of record Eichstaedt et al. USP 6,108,645 teaches bottom-up evaluation technique and Levy et al. USP 5,659,725 teaches a directed acyclic graph in which predicate push down through union and intersection nodes. At the end of the top-down phase, the same predicates may be repeated in many nodes of the tree. When a query tree is created from a DAG query, several subtrees of the tree may corresponding to the same view. However, in the independent allowed claims, *the limitation of creating a virtual Direct Acyclic Graph (DAG) . . . eliminating one or more subscribers . . . identifying at least one matching subscriber . . . the DAG has a root node, one or more leaf nodes representing subscribers . . . constructing the DAG in a top-down fashion so that common predicates shared by the subscribers are examined first and a minimal number of boolean tests are conducted to identify the matching subscribers.* Such a limitation, in combination with other limitations of the independent claims was not taught by, would not have been fairly suggested by, nor would have been obvious over the prior art of record. The dependent claims, being definite, further limiting, and fully enabled by the specification are also allowed.
